| TITLE: Held SYSOUT (aka MSGCLASS=T) Restrictions |
| |
| |

| Purpose |
| |

To announce and document regulations and restrictions concerning use of held SYSOUT classes (normally 'R' and 'T').

| Definitions |
| |

SYSOUT classes 'R' and 'T' are JES3 'held' sysout classes which are accessible through TSO.

| Background |
| |

These regulations and restrictions are not intended to be punitive in nature, but are instead intended to prevent system problems due to insufficient space on the JES3 queues. The Iowa Electronic Information Services Association (Technical Group) has approved these regulations.

| Regulations and Restrictions |
| |

Any job which queues more than 20,000 lines of output to the held output classes may be cancelled immediately and without prior notification.

Any time the JES3 spool space available drops below 25%, the Data Center Operations Section may requeue all held output to print immediately and without prior notification. This measure may be necessary in order to prevent having the entire system lock up due to insufficient spool space.

Held SYSOUT classes are intended for temporary use, not to exceed 24 hours on the queues for any job. Data Center Operations Section may at any time requeue to print without prior notification all job output from held classes which has been in the queues for over 24 hours. This will not be done on holidays or weekends unless necessary.

| Implementation Date |
| |

These regulations and restrictions are effective immediately.

This document is the current version of Advisory 2.13.7038
that had been issued by the Comptrollers Data Processing Division
